T.A.S. Single Dot Fiber Optic Sight For GLOCK and Springfield XD / XDM

The T.A.S Pistol Sight for Glock and Springfield XD / XDM firearms allows for a fast and clear sight picture through unique, cutting edge fiber optics technology.

The T.A.S. Single Dot Fiber Optic Sight features:

- 1.2mm diameter dot
- Extremely rapid and intuitive target acquisition
- Natural and easy use of both eyes
- High first hit probability when shooting under pressure!
- Low profile design
- Intuitive for targets up to 15 Feet

The T.A.S can be used with or without a front sight. When the shooter has a good sight picture the front sight disappears from view and the T.A.S. takes over.

The T.A.S. is available in red or green and features a light tunnel where the bright aiming dot becomes visible once the shooter has acquired a good sight picture. Once that sight picture has been established, shooters can use the sight just like any electronic red dot.

Shooting with both eyes open, the T.A.S. aiming point seems to float in space.

Technical information:

- Aircraft grade aluminum 7075 and polycarbonate.
- Machined to the accuracy of a hundredth of an inch, ensuring a robust and accurate product.
- Dimensions: H 4.2mm, W 18mm, L 41-51mm
- * Not available for XDM 5.25

MSRP: \$89.95
