T.A.S. "J" Pistol Sight for GLOCK and XD / XDM

Laser Ammo offers T.A.S. Sights for GLOCK and the Springfield XD / XDM line up (with exception of the XDM 5.25)

The T.A.S Pistol "J" sight is based on cutting edge fiber optics technology to ensure that a clean sight picture is presented to the shooter.

The T.A.S. "J" features:

- 2.8 mm diameter dot
- Fast alignment of rear and front sights
- Perfect for using 6 o'clock aiming point
- Built for long distance accuracy
- Low profile to fit every holster
- Large dot suited for shooter who wears corrective lenses or glasses

This sight is based on a 2 dot sighting system. Using a 6 o'clock sight picture, simply align the fiber optic dot with the top of the front sight to make one direct line to the target.

The T.A.S. J Sight makes it easy for the shooter to keep both eyes open and accurately engage targets even at further distances. Users with corrective lenses or glasses will find this sight makes acquiring a sight picture easier and faster.

As with all TAS sights, the J Sight provides very fast target acquisition, great accuracy, low profile and simple installation.

J Sights are designed for emergency one hand racking.

Available for GLOCK or Springfield XD/XDM in Red or Green.

MSRP: \$75
