SureStrike™ AirSoft Vibration Cartridge

The **SureStrike™ Vibration Cartridge** is a 9mm cartridge that converts your airsoft platform to a laser-emitting airsoft rifle or pistol for a full-blowback, dry-fire practice, together with the LA FLASH airsoft rifle adapter, the Recoil-Enabled Airsoft Laser (R.E.A.L.) Conversion Kit or the SPIDER.

The 9mm cartridge is **activated by the vibration** of the airsoft pistol, unlike conventional SureStrike™ laser cartridges that activate through contact with a firing pin.

With the SureStrike™ Vibration Cartridge, you can continue to develop and maintain your shooting skills - practicing your stance, gun presentation, sight alignment, sight picture, breath control, trigger pull and follow-through with **a full cycle and airsoft blowback.**

Activated by the vibration of the airsoft, the SureStrike™ will emit a red or IR laser and activate any electronic target, simulator, Laser Tag hardware or even MILES gear.

(*) If you are using a Glock 17R (red Glock), see our vibration cartridge with extra sensitivity.
